PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience across fintech and consulting, specializing in Azure cloud platform, ETL pipelines, and business intelligence, with a proven track record of building scalable data infrastructure and delivering actionable insights across cloud environments.

PROFESSIONAL EXPERIENCE

Data/Automation Engineer – Data & Operations Team Bradley, Foster & Sargent, Inc.

Hartford, CT
September 2025 – Present

- Built ETL pipelines to ingest Client portfolio & holdings data from upstream asset management systems via REST APIs with OAuth 2.0, landing raw JSON payloads into Azure Data Lake Storage Gen2 for downstream processing.
- Loaded Client Portfolio data from ADLS into an Azure SQL database, designing table relationships and schemas to enable efficient querying for investor and reporting workflows.
- Developed Power BI dashboards consolidating AUM, compliance, and accounts data with automated real-time refresh, saving 8+ hours of manual reporting per week across leadership and compliance team.
- Built Power Automate flows for trade restriction notifications and reconciliation alerts, improving monitoring of data discrepancies and enabling faster issue resolution across cross functional business teams.
- Deployed a Model Context Protocol (MCP) server on an Azure VM using Python to integrate with upstream APIs, enabling LLMs to securely query portfolio data while maintaining strict data governance.
- Established data governance standards by documenting workflows, lineage, and definitions across systems, enabling audit readiness and improving data traceability.

Data Engineer Citi Bank

Indore, India
April 2021 - June 2023

- Architected an Azure Databricks Medallion lakehouse utilizing Apache Spark, consolidating 50+ legacy SQL and Blob Storage sources into a unified platform serving 1M+ daily transactions.
- Engineered a metadata-driven ingestion framework using config-driven, parameterized notebooks and Databricks Jobs, achieving a 99.8% success rate across 200+ daily pipeline runs with full audit traceability.
- Developed PySpark transformations merging internal accounts with external credit bureau reports, standardizing risk metrics and reducing KYC compliance reporting turnaround by 45%.
- Implemented enterprise data governance in Unity Catalog, applying PII masking and RBAC across 500+ sensitive data assets to support regulatory compliance and audit requirements.
- Deployed Databricks Dashboards and Genie to enable AI-driven self-service analytics, reducing time-to-insight by 50% and cutting recurring ad-hoc report requests.

DATA ENGINEERING & ANALYTICS PROJECTS

Automated REST API Data Pipeline

Developed end-to-end automation using OAuth 2.0 and Power Automate to extract daily holdings and account data from Black Diamond APIs, enabling real-time portfolio dashboards and eliminating manual data refresh processes.

Portfolio Data Centralization & Modernization

Centralized portfolio data in Microsoft Azure Data Lake, replacing legacy Axys flat-file storage with a relational & hierarchical data model across portfolio, account, and holdings data, enabling scalable reporting and AI driven downstream use cases.

Executive Portfolio & Compliance Dashboard

Created an interactive Power BI dashboard integrating data from Axys and Black Diamond to visualize Total AUM, fund classifications, custodial breakdowns, and SEC metrics, improving compliance monitoring and leadership visibility.

Top Holdings Report Automation

Designing a system to automatically extract, segment, and visualize top holdings by manager and team using Power BI, improving reporting efficiency and investment oversight.

Generative AI Client Onboarding Knowledge Base (In Progress)

Developing a secure, local Generative AI solution using Python and Ollama to convert complex CRM records and client onboarding data into an interactive, natural-language searchable knowledge base via ChromaDB vector embeddings.

EDUCATION

University of Connecticut

Hartford, CT

Master of Science (M S) in Business Analytics and Project Management (Data Science)

Data Management, Big Data and Cloud, Data Science using Python, Predictive Modeling, Data Mining, Statistics

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV)

Bhopal, India

Bachelor of Technology in Mechanical Engineering

SKILLS

Programming Languages: Python, SQL, SAS, R

Cloud and Data Infrastructure: Azure Data Factory, Azure Data Lake Storage, Azure SQL, Azure Key Vault, Databricks, Microsoft Fabric, Microsoft Dataverse

Data Engineering: ETL/ELT Pipeline Development, REST API Integration, OAuth 2.0, SSIS

Business Intelligence and Reporting: Power BI (DAX, Semantic Models, Data Modeling), Tableau

Automation & Integration: Power Automate, Azure API Management, CI/CD, Jenkins, GitHub Actions

Data Security & Compliance: RBAC, Azure Key Vault

Project Management: JIRA, MS Project, SharePoint, Agile, Scrum, Cost Optimization(Monte Carlo, Brute Force)

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Professional JIRA Certification - Atlassian
- SQL Intermediate Certification – HackerRank
- Python Data Structures - Coursera

PUBLICATION

A Holistic Measure of Socioeconomic Status for Municipal Aid Allocation in Connecticut

Published in International Journal of Innovations in Science, Engineering and Management (IJISEM), Vol. 4, Issue 1 (March 2025).

This study presents a multi-factor model using socioeconomic indicators to guide data-driven resource allocation across Connecticut municipalities.
