PROFESSIONAL SUMMARY

Financial Technology Analyst with 4+ years in Finance and Wealth Management. Expertise in Integrations and reporting solutions. Skilled in supporting cross-functional teams with investment performance, capital flows, and compliance dashboards. Committed to high standards of data integrity and system scalability.

PROFESSIONAL EXPERIENCE

Financial Technology Analyst – Data & Solutions Team Bradley, Foster & Sargent, Inc.

Hartford, CT

September 2025 – Present

- Configured automated reporting workflows using Power BI, Power Automate, and SharePoint to centralize firm-wide AUM, compliance, and holdings data into Microsoft Dataverse.
- Integrated Black Diamond API using OAuth 2.0 and automated daily data extraction pipelines, enabling real-time portfolio dashboards with zero manual intervention.
- Deployed a Generative AI solution using LLM-based text extraction to increase client onboarding efficiency for CRS & Portfolio Managers.
- Developed client and compliance dashboards consolidating Axys and Black Diamond data, improving leadership's reporting speed and accuracy by 40%.
- Built Power Automate flows for trade restriction notifications and reconciliation alerts, enhancing communication between Trading, Compliance, and Ops teams contributing to a 35% efficiency gain.
- Migrated legacy AUM and position reports to scheduled-refresh Power BI dashboards with SharePoint compatibility, increasing data reliability and reducing manual workload.
- Documented data workflows and API integrations to support transparency, scalability, and compliance audit readiness.
- Streamlined processing of large scale portfolio datasets by optimizing Microsoft Dataflows, troubleshooting ETL issues, and improving reliability of data transfer pipelines by 15%.

Data Engineer JPMorgan Chase.

Indore, India

April 2021 – June 2023

- Led infrastructure migration from on-premises Windows testing servers to a centralized cloud-based environment on AWS, eliminating manual server allocation and improving scalability for QA teams
- Engineered CI/CD pipelines using Jenkins and GitHub Actions, automating execution of performance testing workflows and reducing test cycle time by 85%
- Decommissioned legacy infrastructure by consolidating workloads into an on-demand cloud environment, reducing operational costs by \$100K and simplifying system maintenance
- Contributed to data governance initiatives through POC work with TCS Mastercraft DataPlus, implementing data masking, provisioning, and quality controls across SQL Server databases
- Structured and delivered a training program for 2 junior engineers on performance testing practices, improving team capability and ensuring efficient knowledge transfer

TECHNICAL PROJECTS IN ASSET MANAGEMENT

Black Diamond API Integration

Developed end-to-end automation using OAuth 2.0 and Power Automate to extract daily holdings and account data from Black Diamond APIs, enabling real-time portfolio dashboards and eliminating manual data refresh processes.

Portfolio Data Centralization & Modernization (Dataverse)

Centralized portfolio data in Microsoft Dataverse, replacing legacy Axys flat-file storage with a relational & hierarchical data model across portfolio, account, and holdings data, enabling scalable reporting and AI driven downstream use cases.

AUM & Compliance Dashboard Development:

Created an interactive Power BI dashboard integrating data from Axys and Black Diamond to visualize Total AUM, fund classifications, custodial breakdowns, and SEC metrics, improving compliance monitoring and leadership visibility.

Axys Replang Report Engineering

Engineered custom Axys reports using Replang code to automate portfolio label placement in Trade Blotter, eliminating manual configuration effort across trading and billing operations.

Client Onboarding Document Parsing & Autofill System

Built a document parsing solution to extract and structure client information from onboarding documents, enabling automated population of client records and reducing manual data entry for advisors.

Portfolio Data Pipeline & Lifecycle Workflow Enablement

Designed data pipelines to transform complex JSON portfolio and account data into relational Dataverse tables, supporting scalable client onboarding, lifecycle tracking, and advisor reporting.

EDUCATION

University of Connecticut

Hartford, CT

Master of Science (M S) in Business Analytics and Project Management (Data Science)

Statistics, Data management and Business Process Modeling, Predictive Modeling, Project Management, Data Mining and Business Process Modeling (Text Mining and Time Series Forecasting), Data Science using Python, Big Data and Cloud

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV)

Bhopal, India

Bachelor of Technology in Mechanical Engineering

SKILLS

Wealth Management Platforms: Black Diamond, Axys, SS&C/ Advent, Genesis Trading

Business Intelligence & Reporting: Power BI, Tableau, SQL, SSIS

APIs & Integration: OAuth 2.0, Postman, REST APIs, Black Diamond API

CRM: Microsoft Dynamics, Salentica Engage

Data Warehousing: SQL, SQL Server, Oracle, SQL-based ETL, Dataverse

Automation & Data Integration: Power Automate, Alteryx, API integrations, Cloud ETL, Azure API Management

Programming Languages: Python, SQL, SAS, R

Cloud & Database Technologies: AWS (S3, Lambda), Azure Cloud

Project Management & Collaboration: JIRA, MS Project, SharePoint, Agile, Scrum, KPI Reporting

Certifications: [SQL](#) ,Intermediate SQL, Python Data structures
